

# **How to Study for a Science Quiz or Test**

## **Suggestions from Ms. Kelly**

1. Go back through the relevant pages in your Science notebook and ANSWER all the questions again. Be sure to either write the answers or say them out loud. DO NOT just think about the answer in your head. You need to be able to communicate each answer!
2. Make flashcards of the vocabulary words and be sure you know the definitions. This means you understand what they mean NOT that you can recite back memorized words!
3. Go through the vocabulary flashcards again and this time explain the importance of them (in writing or out loud – NOT in your head!). Try using each word in a sentence that shows you understand the meaning of the word.
4. Teach someone else the definitions of each vocabulary word so that they really understand the meaning – not just reciting back words that you taught them.
5. Have someone else quiz you on the vocabulary words and the concepts in your notebook. Remember the most important thing is understanding not memorizing!
